Virgin Island**

Partnership Between UVI and CWT

St. Thomas U.S. Virgin Islands

Caribbean Water Technologies (CWT) and the University of the Virgin Islands Physics and Engineering programs have established a partnership effort to advance both water purification technology, water conservation and climate monitoring. The two organizations have signed an LOI to jointly advance both knowledge and technology. This opens opportunities for students participating in the work/study program to gain applied, real world experience. Nimon Bondurant founder of CWT stated, "I am excited about the partnership as we not only solve one of the most pressing needs in the community, access to safe, clean drinking water, but to also work with the university to develop growth opportunities and jobs in the islands." This partnership extends the CWT mission of becoming a part of the USVI community.

Associate Professor of Physics Dr. David Morris said, "This exciting partnership between UVI and Caribbean Water Technologies supports a local business dedicated to making life better for Virgin Islanders. The partnership also provides critical hands-on research opportunities for the next generation of USVI scientists and engineers being trained at UVI. This hands-on research is key for students wishing to pursue great technical careers in the territory."
